

ABSTRACT

A projection display apparatus of good portability capable of realizing brightness equivalent to that of a conventional display apparatus and displaying a bright projected image upon supply of power has an extra high pressure mercury lamp, a lamp unit for thereby generating first light and light-emitting diodes, and includes a solid state light source unit for thereby generating second light, a movable mirror and a mirror portion adjusting mechanism for selectively guiding the first light or the second light to reflective indicating elements, and a projection lens for projecting the light modulated by the reflective indicating elements.
